Calculation Of Selling Price

In Order Entry

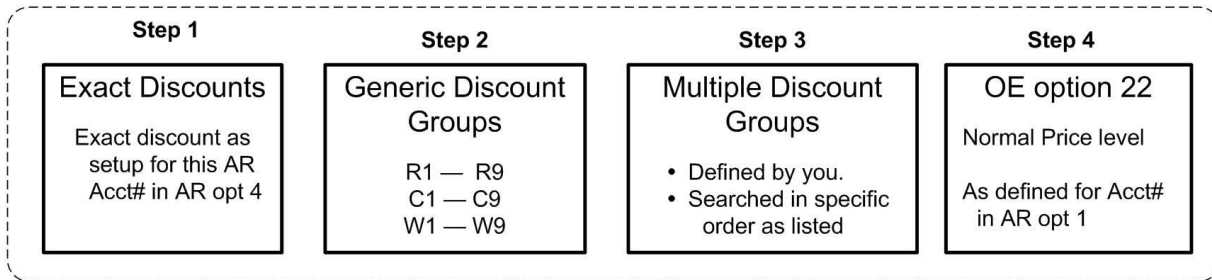

Discount Flowchart Diagram

“Selling Price” Calculation

Whenever an **item number** is added onto an invoice

1. System goes through a series of steps to set the **selling price**
2. When all control options are met, the system assign's the item's price on the work/estimate order.

Control Modifiers

1. Group control modifiers, provide a default setting if not setup in AR option 1.
2. **Best price** option, searches all discount records set, as well as OE option 22 prices, then selects the lowest price that is not zero.
